⌨ brucexi999 • **Available from May 2024 - August 2025**

Education

The University of British Columbia **Vancouver, BC**

Master of Engineering in Electrical and Computer Engineering, GPA 4.0 *2021–2025*

○ Relevant courses: Deep Learning, ML Hardware Accelerator, Computer Architecture, Digital Hardware Design, Embedded System, VLSI, IC Testing and Reliability

Imperial College London **London, UK**

Bachelor of Engineering in Materials Science and Engineering *2018–2021*

○ Graduated with First-Class Honours
○ Obtained Dean's List for three consecutive years (2018-2021)

Experience

Motorola Solutions **Vancouver, BC**

Design Validation Co-op *May-Dec. 2022*

○ Conducted extensive camera tests in various settings, ensuring accuracy and precision
○ Engineered Python-based software for test automation and data analysis, enhancing test efficiency with up to 90% automation
○ Utilized FFmpeg for video processing
○ Collaborated within a team using Git, Confluence, and Jira to optimize workflow efficiency

Project

Multi-agent Deep Reinforcement Learning for VLSI Routing **May-Oct. 2023**

○ Self-taught DRL and VLSI global routing, demonstrating initiative and commitment
○ Developed a multi-agent DRL router using PyTorch and RLlib, the router was equipped with a custom GNN for enhanced policy generalization
○ The proposed router outperformed an A* baseline by 2.6%

Embedded System Development **Jan.-Apr. 2023**

○ Engineered key components of an embedded system including a 4-way set-associative cache controller and a DRAM controller using Verilog. The cache reduced the runtime of a benchmark by 43%
○ Implemented the system on an FPGA with a provided soft microcontroller
○ Developed software and firmware in C that interacted with hardware using SPI, IIC, and CAN protocol
○ Utilized hardware timer interrupt and designed a snake game software that ran on the embedded system

CPU Architecture Design **June-Sept. 2022**

○ Architected a 16-bit RISC CPU from the ground up using Verilog, integrating pivotal components such as FSM, datapath, RAM, and I/O interfaces
○ The CPU supported 13 diverse instructions encompassing ALU operations, memory access, and branching mechanisms
○ Successfully deployed the system onto an FPGA and validated the design's capabilities by executing a test program

System-on-Chip Design **Jan.-Apr. 2022**

○ Designed an SoC which was implemented on an FPGA using Quartus IP Catalog, the system consisted of a soft CPU, an on-chip memory, a memory-mapped interconnect, and I/Os
○ Designed custom hardware using Verilog that adhered to the interconnect's communication protocol
○ Scripted C programs to interact with the system

Skills

Hardware: Verilog/SystemVerilog, FPGA, ModelSim, Quartus, Cadence

Software: Python, C/C++, Assembly, Linux

DevOps Tools: Confluence, Jira, Git, GitHub
